## Segmented Woodturning

## Agenda

- PowerPoint
- Segmented Basic's
- Segmented Styles
- Traditional Segmented (no feature ring)
- Feature Rings
- Segmented Vessels With Feature Rings
- Stacked Lamination
- Bowl From a Board
- Open Segmented (with jig)
- Closed Segmented (with jig)
- Step by Step Segmented Build
- Design Time
- Build Time

## Segmented Terms

## Segmented Terms

## Segmented Ideas

## Segmented Math

- Circumference (C) $=$ Diameter(D) $x \pi$
- This the most important formula to remember ( $\mathrm{C}=\mathrm{D} \times \pi$ )
- Angle= 180 / \# segments
- Segment Edge Length (SEL) = D x tan(angle)
- C $\approx$ \#segments x SEL
- $\operatorname{SEL} \approx$ C/ \# segments $\approx(D x \pi) /$ \#segments

## Segmented Math

## Segmented Math

Board Length $=($ SEL + Blade Width - Board Width $\times$ Tan(angle) $) \times$ \#SEL

## Segmented Details

Cutting Summary Untitled

| Row | Type | Segments | Board Thickness | Diameter | Diameter | Segment Edge Length | Vertical Spacer Width | Board Width | Economy Board Length | Miter Angle |

## Closed Segmented With a Gluing Jig

## Step By Step Segmented Build

## Step By Step Segmented Build The Plan

Plan calls for $1.49^{\prime \prime}$ SEL $1.25^{\prime}$ for segment and $0.25^{\prime \prime}$ for spacer of Walnut C = Dx3.14.1 = 23.56, so SEL approximately $23.56^{\prime \prime}$ | $16=1.472^{\prime \prime}$, good to do a quick check.
$\left(7.5^{\prime \prime}-6^{\prime \prime}\right) / 2=0.75$ ", board width of feature ring

## Step By Step Segmented Build Feature Ring

## Make 16 <br> 

## Step By Step Segmented Build

Feature Ring

Step By Step Segmented Build - Feature Ring

Glue up four Maple and Walnut blocks

## Step By Step Segmented Build - Feature Ring

Cut Maple and Walnut blocks in half and sand to $1 / 4$ "

Step By Step Segmented Build - Feature Ring

Glue Up Blocks

Step By Step Segmented Build - Feature Ring

Cut blocks into 5 equal segments, also cut Walnut segment separation

Step By Step Segmented Build - Feature Ring

11.25-degree angle on each side

Step By Step Segmented Build - Feature Ring

Glue up ring, insert Walnut segment spacers

## Step By Step Segmented Build - Bowl

Adjust if feature ring deviates from original plan

Step By Step Segmented Build - Bowl

Adjust if feature ring deviates from original plan

Mill wood needed to complete project

## Step By Step Segmented Build - Bowl

Make waste block and screw faceplate to waste block

Put double sided tape on one side of thin square of Walnut, this will be for the bottom of the bowl. Stick board to waste block and turn a circle.

The outside diameter needs to be larger than row 2 ID and fit into row \# 1.

Step By Step Segmented Build - Bowl

Note:
For all stock add wavy line on the top of the board and a straight line on the side. Use to position segments.

Arrange segments so all have line on top and the line on the outside of the segment alternate between line and no line. Then apply glue.

Cut segments for row \#1 and glue up, SEL = 1.19", board width = $1.41^{\prime \prime}$

Apply pressure by putting rubber bands on the outside of ring

Step By Step Segmented Build - Bowl

Sand row 1 flat and glue to waste block

For row 1 clean out space for bowl base.

Step By Step Segmented Build - Bowl

Sand row 2

Clean row 2 inside diameter first if possible so you will not need to clean it after you glue it to row 1.

This will reduce the possible tooling on the base of the bowl.

## Step By Step Segmented Build - Bowl

Center Row 2 onto Row 1, mark with pencil on Row 2 OD of Row 1

Mark on Row 2 the outline of Walnut base.

Add tape to Walnut Base incase glue gets onto it.

## Step By Step Segmented Build - Bowl

Only apply glue to Row 2.
Apply glue to Row 2 in between the pencil lines, don't overdo the amount of glue applied.

Glue Row 2 to Row 1.

Step By Step Segmented Build - Bowl

Build row 3

## Step By Step Segmented Build - Bowl

True up row 2. cut, glue up and sand row 3 and mount it to row 2

Clean row 2 and true up row 3

Row 15 has 32 segments, so the Wedgie Sled need to be adjusted to cut 32 segments per row. Also, the origin on the digital table saw stop will be needed set. Cut Row 15 last if possible

Step By Step Segmented Build - Bowl

Cut segments, glue up the rest of the rings, rows 4 - row 16 .

Sand rows then start splitting them as needed.
Row 5 and Row 11 share one ring (split into 3 ) with extra ring

Step By Step Segmented Build - Bowl

Row 7 and Row 9 share one ring split into 2

Row \#4, \#6, \#9 and Row 12 all share one ring, spilt into 4 rows

Step By Step Segmented Build - Bowl

Glue rows 14, 15 and 16 together

Step By Step Segmented Build - Bowl

After all the split rings have been cut and sanded, they need to be glued together to follow plan

## Step By Step Segmented Build - Bowl

Glue all ring groups together to follow plan

Step By Step Segmented Build - Bowl

Done

## SEGMENTED WITH A JIG

SEGMENTED WITH A JIG
